rebase without pain

0. Rebase as usual, if there are no conflicts, job is done
`git rebase origin/master`

1. If there are conflicts, abort rebasing
`git rebase --abort`

2. Merge with squash
`git merge origin/master --squash`

3. Resolve conflicts
`git mergetool`

4. Finalize merge
`git commit`

5. Rebase
`git rebase origin/master`

6. Resolve conflicts automatically
`git checkout --theirs .`

7. Add resolved conflicts
`git add .`

8. Continue...
`git rebase --continue`

You've got it. Curious what happened?
`sign up for training`
